

- Ventury Injectors are easiest way to give acid treatment, fertigation.

## Application:

- Fertilizers, chemicals, additives, etc can be injected into the water using the ventury injectors.
- These can be also be used in series with a motor as shown in the photograph for fertigation application without any loss in discharge In the system lines.

We have different types plastic venturies - 2" , 1" & 3/4".

1. 3/4" Ventury :- It sucks 50-100 ltr/hr at 0.4-0.6 kg/cm<sup>2</sup> differential pressure. It comes with full assly & also without assly. Full assly contains composite pipe with adaptors & also suction tubing, cock & strainer filter. Without assembly ventury contain only suction tubing, cock & strainer filter.

2. 1" Ventury :- It works at 0.4-0.5 kg/cm<sup>2</sup> differential pressure & capacity of 50-150 ltr/hr. It also comes with suction tubing, valve & strainer.

3. 2" Ventury :- It works at 0.5 kg/cm<sup>2</sup> differential pressure & capacity of 500 ltr/hr. It also comes with suction tubing, valve & strainer.

4. 2" Turbo ventury: It works at 1200 ltr/hr. It comes with suction tubing, valve and strainer. It is one of the most popular of all.
